Cover Letter (Business Analyst Role)

Dear Hiring Manager,

I'm Akshat Raj, a final-year IT student, actively building AI-powered business tools using LangChain, FAISS,
and Power BI. My goal is to integrate cutting-edge tech with decision-making impact.
I'm currently building a local AI assistant to query internal PDFs and developing dashboards for actionable
insights. These align closely with the needs of a Business Analyst who understands both business logic and
technical integration.
I'd be thrilled to contribute to your team and can walk you through my ongoing projects, even before they go
live on GitHub.
Thank you for considering my application.
Sincerely,
Akshat Raj
